

NOW Arena Wi-Fi Expansion

Questions/Answers

1. In the spec it calls out Cat 6A. If it's a 1 one for swap 1 can the existing cable be used or do we need to replace the existing with Cat 6A or in this case is the existing cable adequate? **1 for 1 replacements can use the existing cables**
2. I noticed on the latest handout near the end that the count shows 106 AP's. In the spec and during the walkout the count was said to be 107. Is one missing? **There are a total of 106 access points for this project**
3. Yesterday it was mentioned we would be getting a document with all the AP's and their distance to the nearest IDF. Is there an ETA on this? **Please submit a request for the document by emailing RFP@vohe.org**
4. During the walkthrough, it sounded like the bridge level AP's would be moved more towards the center of their areas and connected to the wall jacks under the countertops. According to the prints, the AP's on this level are existing and not moving. Can this be clarified? **There are currently no access points on the Bridge level but there will be 4 new ones that will need to be installed with new cable runs.**
5. On the Catwalk level, is the blue dot representing the IDF on the right side of the drawing in the right spot? During the walk out it sounded like it was further down the drawing than the current location. In its current location some of the AP's are out of range from both IDF's. **On the catwalk the IDF will be on the lower right side instead of the middle right side. Please submit a request for the document by emailing RFP@vohe.org**
6. Can cable be run across the center beam that the right side IDF almost lines up with? **Cables can be run across the beams.**
